
TRIDICULOUS! SOLUTION

This puzzle is solved the same way as Old Shackles. The main difference is that the triangle must be positioned precisely. Here's how: Start by holding puzzle as shown in drawing at right. One hand should be slightly higher than the other (approx. 45 degrees). Enough out-ward pressure should be exerted to keep the puzzle taut. Twist your top hand away from you and downward (at the same time), allowing the triangle to sit at the center of the puzzle. The triangle then needs to be rotated into position as shown below, allowing it to drop down into the center for removal.

REASSEMBLY: Hold the puzzle as shown above. Keeping the W shape, turn upside down (so it looks like an M) and open.
